Pankhuri Gupta

Data Analyst • Tableau & SQL • Machine Learning • Python
8445158690 | pankhurigupta040404@gmail.com | LinkedIn | GitHub

Professional Summary

Final-year B.Tech student specializing in Data Science, passionate about transforming complex data into actionable business insights. Proficient in SQL, Excel, Tableau, and Python, with experience in data analysis, visualization, and machine learning. Focused on identifying patterns, solving business problems, and translating analytical findings into insights that drive informed decisions. Combines technical expertise with structured problem-solving and AI-assisted workflows to deliver efficient, insight-driven solutions.

Education

SRM IST – Ghaziabad — Ghaziabad, India
B.Tech, Computer Science and Engineering; CGPA: 9.24/10 — *2027*

Rajendra Academy — Moradabad, India
Class XII – CBSE, PCMB; Percentage: 78% — *2022*

Shirdi Sai Public School — Moradabad, India
Class X – CBSE; Percentage: 93% — *2020*

Technical Skills

Programming: Python, SQL, C++
Data Analysis BI: Advanced Excel, Tableau, Dashboarding, KPI Reporting
Databases: MySQL, Joins, Database Design
Data Science: Pandas, NumPy, Scikit-learn, TensorFlow, Statistical Analysis, Machine Learning
Data Preparation: Data Cleaning, Data Transformation, Data Validation
Tools: Git, GitHub, AI-Assisted Development

Projects

Blood Bank Service Capability & Compliance Gap Analysis | SQL, Excel, Tableau | GitHub — Aug 2026

- Analyzed service capability and compliance data across 2,823 blood banks nationally, identifying that only 16.4% offer advanced service capability and 38.6% carry regulatory compliance risk.
- Developed a weighted Priority Score framework to rank states by combined risk, converting disconnected metrics into a single prioritization model.
- Built an interactive Tableau dashboard with KPI, geographic, and recommendation views, translating the analysis into two distinct, root-cause-specific recommendations.
- Used AI integration throughout: defined the key questions and insights to investigate, and worked with an AI agent to write and refine the queries.

Ethereum Fraud Detection (Anomaly Detection) | Python, TensorFlow, Scikit-learn | GitHub — Apr 2026

- Built an unsupervised autoencoder model in TensorFlow to detect fraudulent transactions across 9,841 blockchain accounts, achieving an F1 score of 0.74 and detecting 78.7% of fraud cases.
- Framed fraud detection as an anomaly detection problem, where accounts that the model reconstructs poorly are flagged as suspicious, removing the need for labeled training data.
- Prepared the data using RobustScaler to limit the effect of extreme transaction values, and validated the model with 5-fold cross-validation.
- Improved performance through systematic hyperparameter tuning, and benchmarked the autoencoder against Isolation Forest and One-Class SVM, outperforming both.
- Used AI integration to direct the analysis: defined the problem, the evaluation approach, and the questions to answer, while an AI agent helped write the code.

India Climate Analysis & Forecasting (1901–2017) | Python, Scikit-learn, Tableau | GitHub — 2026

- Analyzed 116 years of Indian temperature and rainfall data to identify long-term warming trends and shifts in seasonal rainfall patterns.
- Developed a regression-based forecasting model in Python to project long-term climate trends.
- Cleaned and transformed raw climate data into a Tableau-ready dataset for visualization and reporting, leveraging AI tools to streamline code development.

Certifications

- SQL for Data Science, UC Davis (Coursera), May 2026
- Natural Language Processing, NPTEL, Apr 2026
- Introduction to Business Intelligence, Infosys Springboard, Jun 2025
- Data Science, Infosys Springboard, Jun 2025
- Big Data, Infosys Springboard, Jun 2025
- AI and Python Development, Udemy, Apr 2025
